AILT9019 Midterm Check Requirements

Submit one team ZIP file (maximum 100 MB) on Moodle by Monday 26 October 2026. Use the exact cutoff shown in Moodle; its timestamp is authoritative. The check is worth 5% of the course grade. It assesses a working core path, credible evidence and a practical plan, not visual polish.

Put these three items in the ZIP

Item	Required content
1 Minute Recording	Include a video file showing one real input, the system processing it, and the resulting output in 60 seconds or less. Use narration or captions to make the video clear and easy to follow. Keep the screen readable. Do not use slides in place of a running workflow or expose personal data, notifications or API keys. The video should be in mp4 format.
Repository Link Text File	Include repository_link.txt with the repository URL. Give the course team access to the current code and a README explaining setup, how to run the core path, and how to check its result.
One Page Status Sheet	Include the completed companion template. State what works now, test evidence and limitations, blockers with owners, three dated milestones for the next two weeks, each member's contribution, and the scope decision.

How it is assessed

The published 20 point rubric assigns 6 points to the core workflow, 4 to repository access and reproduction, 3 to testing and limitations, and 4 to blockers and the plan. These 17 points are shared by the team. The remaining 3 points are individual: each member with a genuine contribution receives 3; a confirmed free-rider receives 0. List each member's completed work in the Contribution and scope section of the one-page team status sheet. No separate individual submission is required. Confirmed free-riding will incur a more substantial individual penalty at the final project stage.

Final checks

Check that the ZIP opens, is no larger than 100 MB, and contains all three items; the recording plays; the repository opens for staff; the sheet fits on one page; and every team member can see the Moodle group receipt. Report partial work honestly and identify the next verifiable step.
